Course Title: Materials, Techniques & Technologies; Addressing the Direct & Indirect Solution

COURSE DESCRIPTION

With today's advanced restorative materials, success is dependent upon 4 major elements: technique, knowledge, accuracy, and preparedness. This presentation will examine how each element plays a critical role in the success and longevity of your direct restorations when determining materials, systems and techniques. Be prepared to take your clinical success to a new level after attending this course!

Objectives

1. Learn the newest techniques & technologies for placing direct & indirect restorations.
2. Learn how to organize your indirect procedures to increase efficiency and ensure a predictable successful result every time.
3. Learn adhesive strategies for both direct and indirect restorations.
4. Learn the difference between cementing and bonding and what resin luting cements to use for different clinical situations.
5. Learn how to master the master impression
6. Learn how light plays a major role in long term success of direct & indirect restorations

Bio:

Dr. Sam Simos received his Doctorate of Dental Surgery at Chicago's Loyola University. He is a graduate of the comprehensive surgical program at the Misch Institute for Dental Implants in Michigan, the leading post-graduate dental implant training center, and is nationally recognized as a leader in cosmetic and restorative dentistry.
